

PROJECT SHREDDER — MONDAY GAME PLAN

Not Yo Momma's League • 12-team • Half PPR • YOU = slot 11 "new junk city" • draft Mon 8/24

YOUR PICKS (SNAKE, SLOT 11)

11 • 14 • 35 • 38 • 59 • 62 • 83 • 86 • 107 • 110 ...

Lineup: QB1 • RB2 • WR2 • TE1 • FLEX1 • DST1 • K1 • bench 7

You pick 11 & 14 back-to-back (turn), then wait 20 picks. Leave R1/R2 with TWO studs — you won't pick again till #35.

PICK #11 — WHAT SHREDDER SAYS

1	Jahmyr Gibbs RB-DET	18% survives
2	Bijan Robinson RB-ATL	last T1 RB
3	Christian McCaffrey RB-SF	25%
4	Jonathan Taylor RB-IND	last T2 RB
5	Puka Nacua WR-LAR	soft slate A

Plan: if a Tier-1 RB falls to 11 — **pounce**. Prophecy says one likely will: **Achane 40%** • **Jeanty 30%** • **Chase Brown 28%**. Only 2 true Tier-1 RBs remain — the cliff is right at your seat.

TIER CLIFFS (STARTABLE TIER REMAINING)

RB Tier-1	2 left
WR Tier-1	4 left
TE elite (McBride/Bowers)	2 left
QB elite / DST elite	1 each

RB cliff hits earliest → secure RB early. TE has a real top-2 (McBride/Bowers) then a big drop; if you miss both, **wait** — streaming TE is fine.

DON'T REACH — THESE CAN WAIT

- QB** deep — elite QBs (Allen/Lamar/Hurts) go ~R3-5; grab one mid-draft, don't burn an early pick.
- K** **last pick, always**. 22 kickers are ~interchangeable.

TD CEILING — QB RUSH VULTURE CHECK

TDs PROTECTED (pocket QB)

Gibbs • CMC • J.Taylor • Chase Brown • Achane • Kyren

TDs CAPPED (rushing QB steals goal-line)

Bijan (ATL) • Saquon (PHI) • Henry (BAL)

Tiebreaker only — never a reason to pass a stud. If choosing between similar RBs, the pocket-QB back keeps his rushing TDs.

HANDCUFFS — GRAB LATE FOR YOUR RBS

A bellcow is one injury from zero. Late in the draft, grab the backup behind each of your RBs (and consider stashing another team's handcuff if their starter is fragile).

Do this live: the Roster Lab tab maps the exact current handcuff for whoever you actually draft, off live depth charts — trust that over any pre-printed name (offseason backups shift).

HOW TO READ THE BOARD

- WON'T LAST** take now — gone before your next pick.
- CAN WAIT** he'll survive — take the scarcer need first.
- TIER CLIFF** last of his tier — don't let it walk.
- VALUE +N at POS** model ranks him N spots above ADP *at his position*.
- context** situational read (QB-rush, role).

Ignore raw K/DST "value" flags — they're tiny positional edges, not steals.

IN THE ROOM

- Connect ESPN (cookies saved) OR log in via button.
- Tap ✓ / X as picks happen so DNA, Prophecy & the queue stay live.
- Watch the CLIFF banner — it fires when a need is about to dry up.
- Let the queue plan 2-3 picks ahead; trust WON'T LAST over CAN WAIT.

- **DST** stream late — but your league values elite D, so a top unit (SEA/DEN/LAR) in the last few rounds is fine.
